22	Mississippi	9,671
23	New Mexico	8,167
24	Colorado	7,142
25	Minnesota	6,735
26-50	Other States	18,647

Jobs Supported by State Exports FAQs:

Q: Where is the complete Jobs Supported by State Exports List?

A: The complete list is available on our website at: <http://www.trade.gov/mas/ian/employment/index.asp>.

Q: Why isn't there jobs supported by Total (Goods and Services) State Exports detail?

A: Unavailability of services export data by state prevents the estimation of state-level jobs supported by services exports and total (goods and services) exports.

Q: Can I add jobs supported by total goods (or manufactured-only) exports estimates from several states together to create a custom regional estimate?

A: Yes. For example, if I wanted to know the number of jobs supported by manufactured exports from New York and New Jersey, I would add 287,726 and 137,670 to arrive at a total of 425,396 jobs that are supported by 2014 manufactured exports from New York and New Jersey combined. Out of an estimated 6.2 million jobs supported by manufactured exports from all 50 states, manufactured exports from New York and New Jersey together support about 6.9% of the national total.

Q: What does origin of movement mean and how does it impact these estimates?

A: The State Origin of Movement (OM) series is produced by the United States Census Bureau and generally provides export data based on the state from which the export began its journey to the port of export. However, in some cases, the origin of movement data do not reflect the state from which the export was initially transported. For example, when shipments are consolidated, the OM data will reflect the consolidation point of the shipment as opposed to the transportation origin.

Q: What is the difference between goods exports and manufactured exports?

A: Goods exports include manufactured products as well as other products like agricultural goods and natural resources commodities.
