Benefits from the U.S.-Korea Trade Agreement

South Dakota

The impact of the eliminations of tariffs and related barriers is estimated to increase U.S. GDP by nearly $12 billion and U.S. goods exports by nearly $11 billion annually. Adding to this would be new exports of U.S. services, where U.S. firms exported $12.6 billion to Korea in 2009. Together, these export opportunities support the President’s National Export Initiative goal of doubling exports by 2015.

KORUS is Essential to Ensuring U.S. Competitiveness in Korea and Throughout Asia

Ten years ago, the United States was the top exporter to Korea providing one-fifth of all Korean imports; now we are in third place with less than 10% market share.

- U.S. exporters to Korea currently pay an average 6.2 percent tariff, or nearly $1.3 billion a year, to Korea through tariffs on industrial goods.
- Korean exporters to the United States currently face an average 2.8 percent tariff.
- On the first day of the European Union (EU) – Korea FTA, 85% of Korean tariffs on EU products will go to zero.
- Chinese products in Korea benefit from lower transportation and labor costs.

Implementing KORUS can help U.S. businesses and their workers stem this downward slide by making U.S. products more competitive in the Korean market.

- Tariff elimination for over 95 percent of U.S. exports of consumer and industrial products within five years.
- Tariff elimination for nearly two-thirds of U.S. agricultural exports immediately on entry into force.
- Significant new market access for U.S. service suppliers.
- Extensive elimination of non-tariff barriers, including in the autos sector.
- Tariff eliminations and strong transparency obligations will facilitate SME exports.

South Dakota Depends on World Markets

South Dakota’s shipments of merchandise in 2010 totaled $1.3 billion.

- A total of 633 companies exported goods from South Dakota locations in 2008.
- 516 of South Dakota exporting firms were small and medium-sized enterprises (SMEs), with fewer than 500 employees.
- SMEs generated over one-fifth (22.0 percent) of South Dakota’s total exports of merchandise in 2008.

Trade Works for South Dakota

Recently implemented trade agreements have benefited South Dakota. For example, since the U.S.-Chile trade agreement entry into force in 2004, South Dakota’s exports to Chile have grown by 512 percent. Since the U.S.-Australia trade agreement entry into force in 2005, South Dakota’s exports to Australia have grown by 292 percent. KORUS can similarly benefit South Dakota.

South Dakota Exported an Average of $11 Million in Goods to Korea from 2000-2010

Source: U.S. Department of Commerce, International Trade Administration

For more detail on how KORUS will benefit additional business and agricultural sectors in South Dakota, see the Department of Commerce fact sheets at: http://www.trade.gov/fta/korea and the Department of Agriculture fact sheets at: http://www.fas.usda.gov/itp/us-koreata.asp
KORUS Opens New Markets for Key South Dakota Exports

**Processed Foods** – South Dakota exported an annual average of $5.8 million in processed food products to Korea in 2008-2010. KORUS, when implemented, will stimulate new opportunities for South Dakota businesses in this sector. Korea is a growing market for consumer-oriented foods, creating new opportunities for U.S. exports of snack foods, cheese, and juices. KORUS will enhance these opportunities by eliminating tariff and non-tariff barriers that currently hamper exports of U.S. food and consumer products to Korea. Many processed food products will receive immediate duty-free treatment such as frozen french fries and many other processed food tariffs will be eliminated in five years or less.

**Machinery Manufactures** – South Dakota’s exports of machinery will benefit from KORUS tariff reductions. Machinery manufactures accounted for an annual average of $1.1 million of the state’s merchandise exports to Korea in 2008-2010. Many machinery manufactures will receive duty-free treatment immediately upon entry into force of the agreement, including products such as refrigeration compressors, valves, renewable energy equipment, air pollution control equipment (pumps), water filtering and purifying equipment, and piston engines and engine parts. One hundred percent of agricultural and construction equipment, including tractors, lawn mowers, straw balers, conveyors, loaders, bulldozers, mechanical shovels, boring and sinking machinery, derricks, and dumpers, will continue to receive duty-free treatment. The elimination of Korean tariffs on U.S. machinery manufactures will provide a competitive boost to U.S. exporters, who will no longer face tariffs as high as 13 percent.

**Computers and Electronics Products** – Computers and electronics products accounted for an average of $789 thousand per year of South Dakota’s merchandise exports to Korea in 2008-2010. Top U.S. exports in this sector included digital integrated circuitry, semiconductors, semiconductor manufacturing equipment, telecommunications equipment, radio and television parts, static converters, and magnetic tape. Korean tariffs range between zero and 13 percent. KORUS improves market access for computers and electronics products. With the immediate removal of many of these tariffs, U.S. exports will become much more competitive and affordable to Koreans.

KORUS Creates Opportunities for South Dakota’s Agriculture

South Dakota’s agricultural exports, estimated at $2.3 billion in 2009, supported about 18,400 jobs, on and off the farm. These export sales make an important contribution to the South Dakota farm economy, which had total cash receipts of $6.9 billion in 2009. KORUS eliminates tariffs and other barriers on most agricultural products, increasing export opportunities for U.S. agricultural products like those produced in South Dakota such as beef, feed grains, and soybeans. With immediate elimination of duties on nearly two-thirds of U.S. agricultural exports to Korea, KORUS gives U.S. exporters improved access to the Korean market for many of the products that have been highly protected.

For more information on agricultural exports and KORUS, see the fact sheets posted by the U.S. Department of Agriculture at: [http://www.fas.usda.gov/itp/us-koreata.asp](http://www.fas.usda.gov/itp/us-koreata.asp)

All state export data in this report are based on the Origin of Movement (OM) series. This series allocates exports to state based on transportation origin, i.e., the state from which goods began their journey to the port (or other point) of exit from the United States. The transportation origin of exports is not always the same as the location where the goods were produced. Thus conclusions about “export production” in a state should not be made solely on the basis of the OM state export figures.

Prepared by the U.S. Department of Commerce, International Trade Administration.
