

# Global Steel Trade Monitor

**This system is optimized for the latest version of Google Chrome and may not be compatible with other browsers.**

## Summary

The modernized, interactive Global Steel Trade Monitor (GSTM) has many enhanced capabilities and advanced analytic features. Specifically, the new graphics in the interactive GSTM allow users to visualize steel trade data from the world's top 20 steel importing and exporting countries in a variety of ways.

The data can be viewed online through graphs and a map and can also be downloaded for individual, customized analysis.

This quick reference guide describes:

1. How to navigate and customize the graphic displays of the new dashboard for annual and year-to-date data for exports and imports;
2. How users can filter and disaggregate underlying data;
3. How users can then develop customized visuals of the data based on search parameters; and
4. How users can export data from the GSTM for further individual analysis.

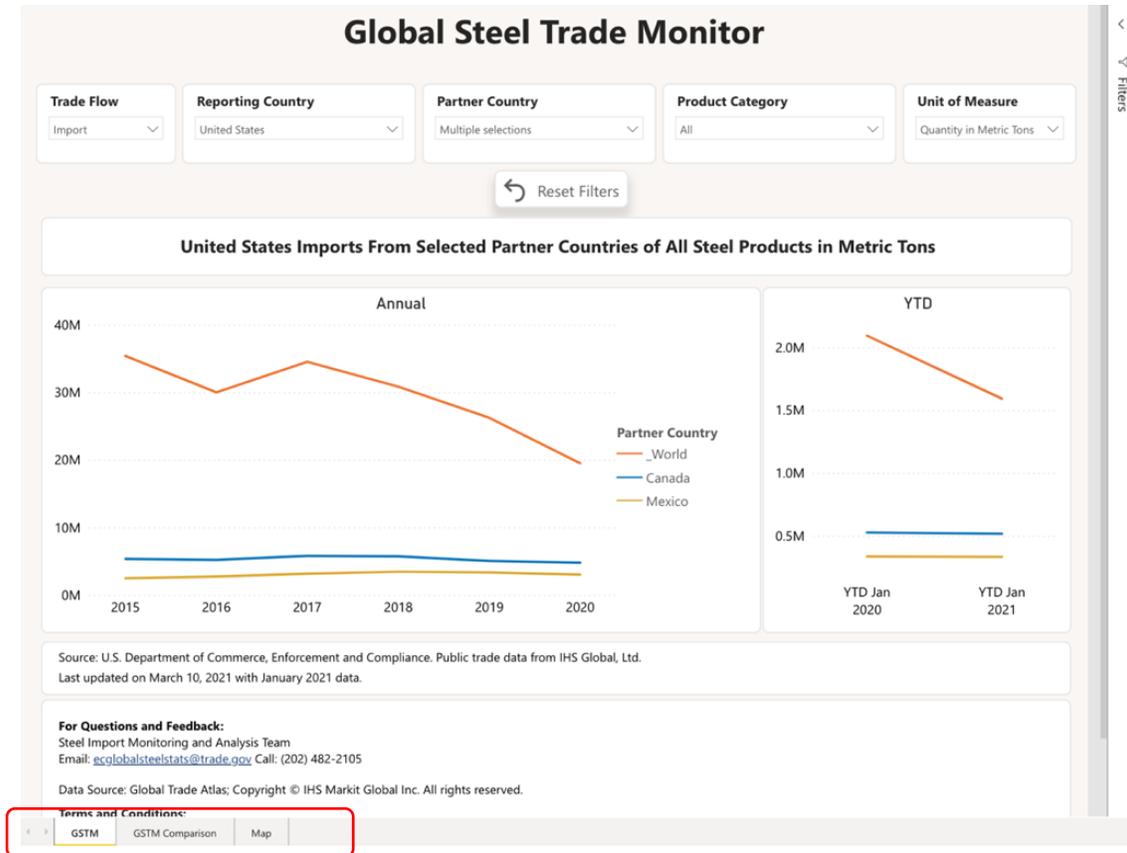

The developments in the GSTM and interactive comparison dashboard will allow users to conduct customized, in-depth analysis of changing trade patterns and product trends for global imports and exports of steel mill products.

## Navigation of the Monitor

The new GSTM is comprised of three tabs located at the bottom of the landing page of the dashboard. The monitor provides data at the aggregate product category level (5 product categories) for the top 20 largest steel importing and exporting countries and the European Union by reporting country and trade partner. The data is updated regularly when countries release their official trade statistics. Here is a visual example for users to reference on how to navigate these tabs:

# Global Steel Trade Monitor

## Quick Reference Guide

There are three of these tabs, each of which includes annual data:

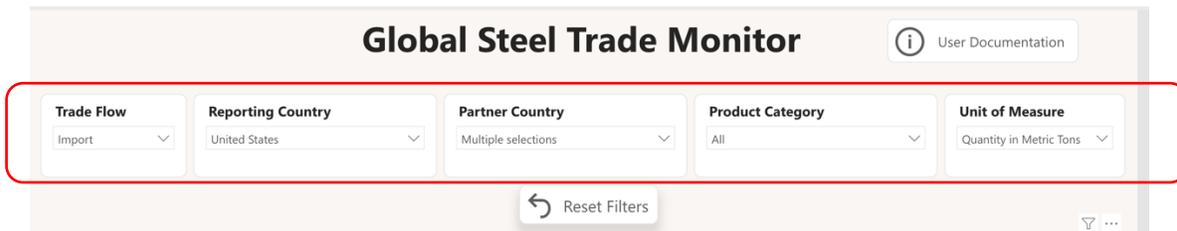

- **“GSTM”**: This tab presents two line graphs. The graph on the left shows annual global imports/exports of aggregate steel categories (represented by the orange line) and the measures from selected partner and reporting countries. The graph on the right presents the same data for the year-to-date data. Hovering the cursor over each point on a line graph displays a tooltip that shows the measure of steel imported from each country, in a given year.
- **“GSTM Comparison”**: This tab displays six bar charts. The first graph shows the total measure of steel traded annually and year-to-date between a reporting country and its trade partner, while the remaining five graphs display the measure of different steel product categories traded. This tab can also be used to compare the yearly measure of imports and exports side-by-side of the total and five steel categories.
- **“Map”**: This tab offers geographic data for the share of product categories imported or exported to each country, in a given year or year-to-date. The size of the pie charts indicates the relative amounts of steel traded by a country, and each color represents a steel category. Hovering the cursor over each slice in one of the various pie charts displays a tooltip that shows the product category and measure amount traded in a given country.

### How to Filter and View Disaggregated/Underlying Data

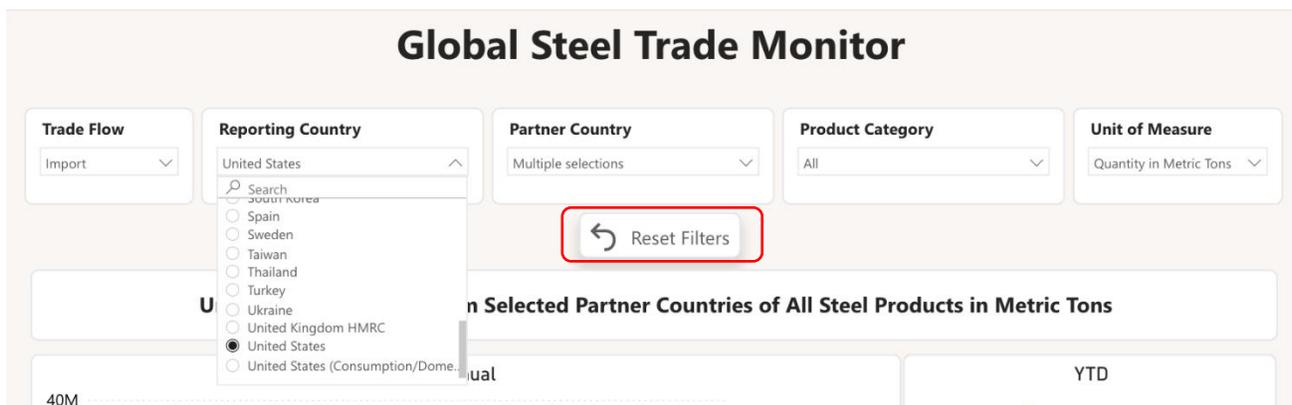

Each tab presents default settings at the top of the page. This allows users to customize their view by using filters to disaggregate the underlying data based on the trade flow, reporting and partner countries, product categories, and data measures of interest (i.e. volume or value). In many of the filters, the user can choose multiple options for viewing the underlying data for more in-depth analysis of steel trade trends.

In the default setting, the dashboard shows all steel imported by volume into the United States from the world, Canada, and Mexico. To filter and disaggregate the data, the user should change the default settings at the top of the page, which changes the views of the subsequent graphs.

These filters, from left to right, include:

- **Trade Flow:** Users can change this filter to view either import or export data.
- **Reporting Country:** This filter allows users to view different reporting countries by selecting a country of interest.
- **Partner Country:** This filter provides a drop-down menu for the user to select various or all trade partner countries of interest.
- **Product Category:** This also provides a drop-down menu for the user to select various or all steel product categories.
- **Select Unit of Measure:** This allows the user to change the measure used for presenting the dataset. The default is to show volume, in metric tons.
  - This drop-down allows users to select "Quantity in Metric Tons" or "Value in U.S. Dollars."
  - Please note that a metric ton is 1,000 kilograms, or approximately 0.907 net tons.

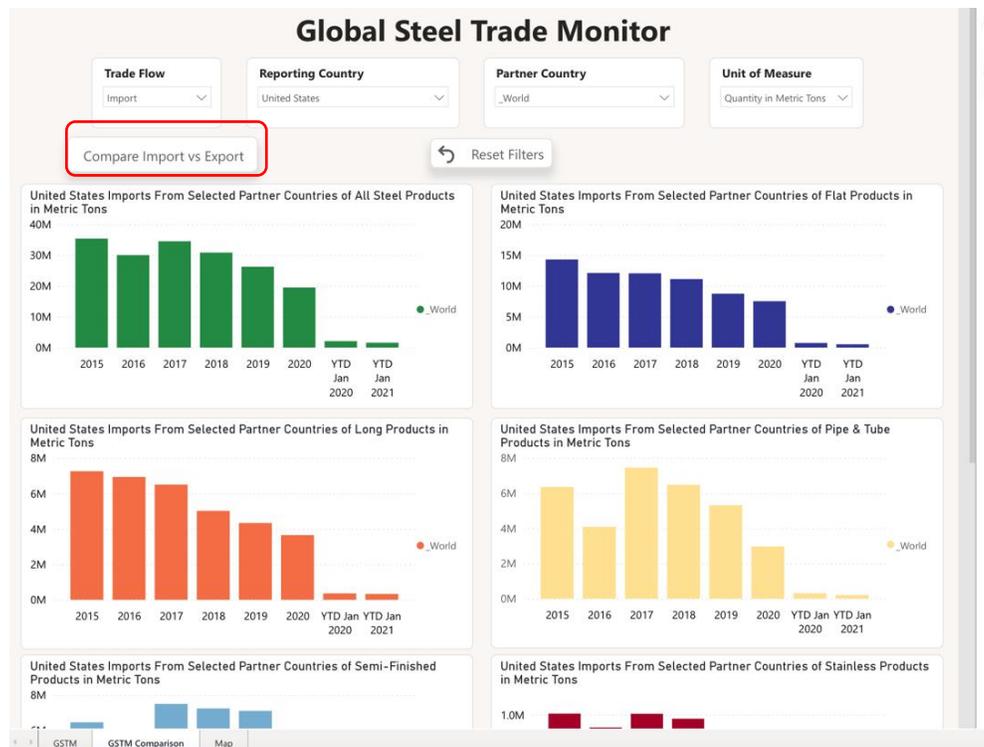

# Global Steel Trade Monitor

## Quick Reference Guide

To return to the default settings, the user may change the filters individually or click on the “reset filters” button.

### Filtering Individual Charts and Maps

- In the “GSTM Comparison” tab, the default view is in **Other Comparisons**. This comparison displays the measure of either imports or exports of steel mill products in aggregate and by product category (i.e., Flat, Long, Pipe & Tube, Semi-Finished, and Stainless).

- Alternatively, select **Compare Import vs Export** to view import and export data for each product category side-by-side.

# Global Steel Trade Monitor

## Quick Reference Guide

For the map: The map geographically displays trade data. Here, the size of the bubbles represents the measure being displayed (for example, volume of imports) and each slice of the pie chart represents a category type of broad steel to or from each country.

- To zoom in and out, **click on the “positive/negative signs”** at the top right corner of the map.

# Global Steel Trade Monitor

## Quick Reference Guide

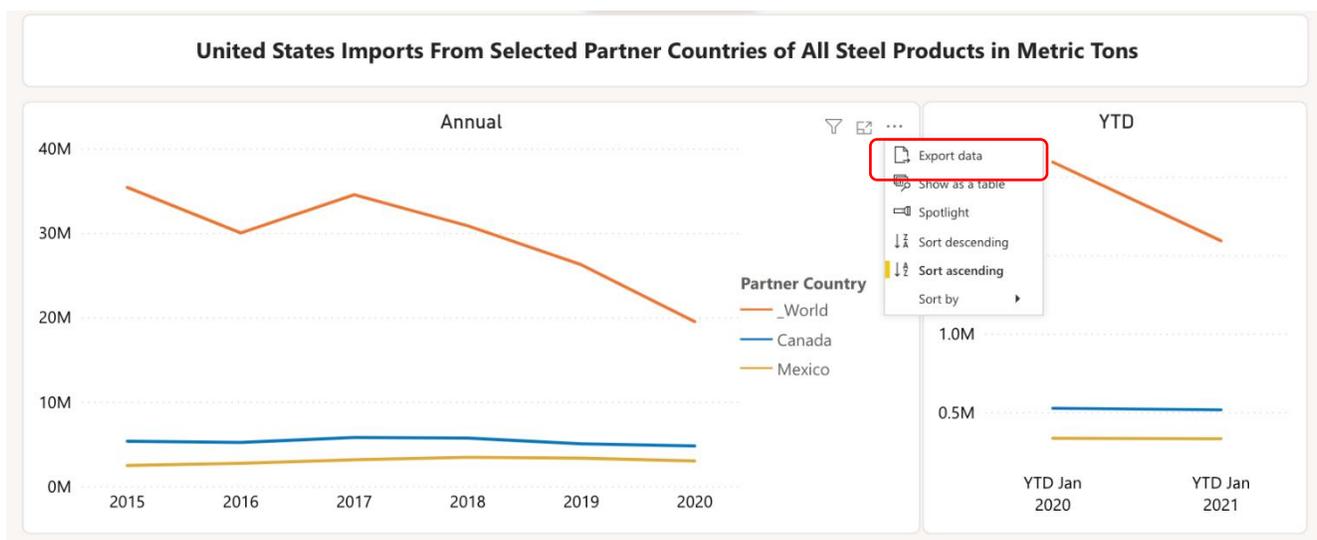

Exporting

Data

Another key feature of the dashboard is that users can export the data for individualized analysis of steel trends:

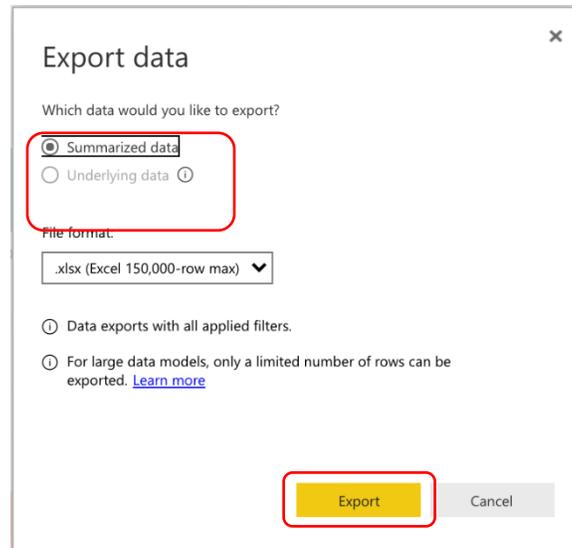

- The user can export data by **clicking on the graph or map, then three dots will appear in the upper right hand corner of the map. Next, click on the “three dots” in the upper right-hand corner of the graph. Next, select “export data.” Do not click on the “three dots” in the right-hand corner, next to the overarching title of each graph; there will be no data downloaded.**

- Then, select “Summarized Data.” **Click “export.”** The downloaded Excel data file will be on the lower left corner of the screen. Open that file.

## Using a Pivot Table to Organize Data

Pivot Tables are a useful means of organizing data for interpretation, once it has been exported to your computer:

- Open the exported data file, now on your computer. Once you have opened the file, delete the first two rows of the sheet.

Partner	Sum of	Product
Canada	3082923	Flat Products
Mexico	1137942	Semi-finished
Korea, South	1015319	Flat Products
Canada	928518.1	Long Products
Mexico	719747.8	Long Products
Mexico	616233.6	Flat Products
Canada	604633.2	Pipe and Tube
Korea, South	574772.7	Pipe and Tube
Mexico	502103.8	Pipe and Tube
Germany	370260.8	Flat Products
Taiwan	321998.9	Flat Products
Japan	306373.5	Long Products
Japan	271372.7	Flat Products
Australia	233602.5	Flat Products
Korea, South	206111.6	Long Products
China	185538.1	Long Products
Germany	159319.5	Long Products
Vietnam	147196.4	Flat Products
Canada	137489.1	Semi-finished
China	107721.5	Flat Products
Taiwan	105594.4	Pipe and Tube
Germany	100702.4	Pipe and Tube
Vietnam	90572.96	Pipe and Tube
Taiwan	83213.78	Stainless
Japan	79993.62	Pipe and Tube

- With the cursor in the data table, click on the Insert tab and select Pivot Table.

- Here is a link to Microsoft's instructions on how to get started using Pivot Tables:

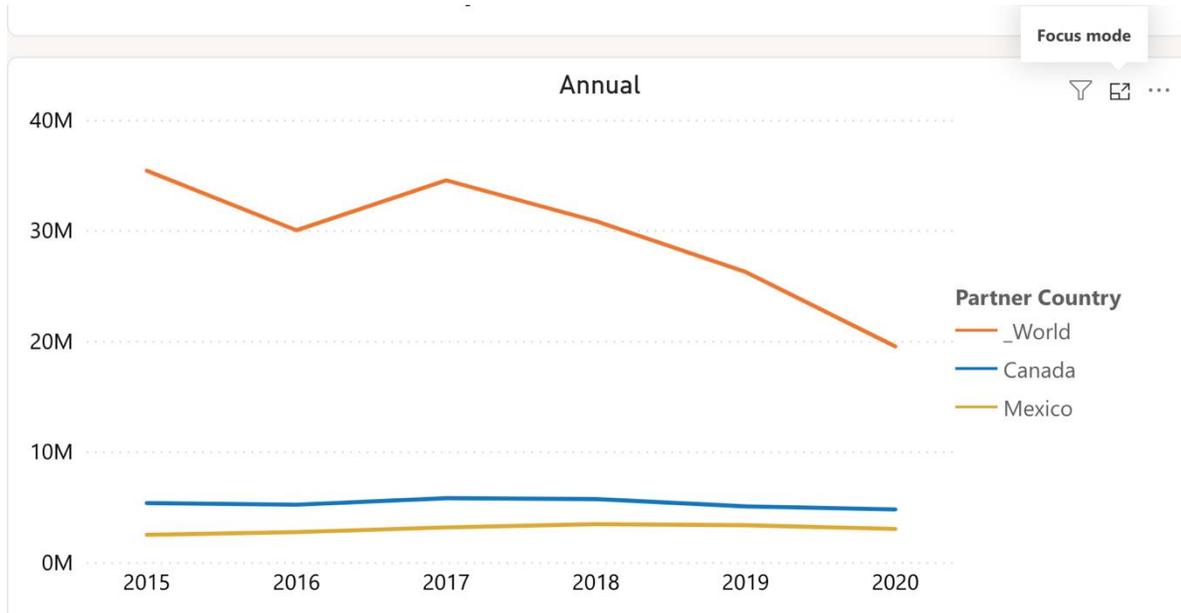

## Printing Tables and Graphs

Tables, graphs, and other graphics in the monitor can be printed or screenshotted as follows:

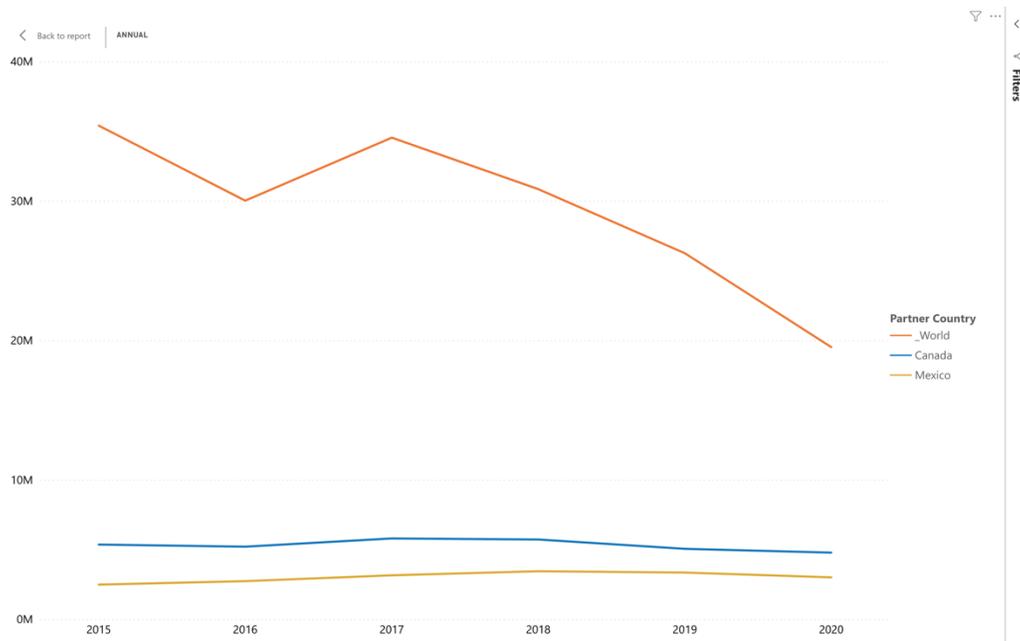

- Once you have the desired filters in place, select "focus mode" in the top right of the graph or table. This spotlights the graphic/table, expanding it to cover the full screen. You can then use any screen capture method, including using the snipping tool or screenshotting, to save the image.
  - For Windows users: to use the snipping tool, click on "New" and point and drag your mouse to select the area you want to screenshot. Then save the image or copy and paste into your desired software, like a Word document.
  - For Mac Users: click "Command" + "Shift" + "4" and select the area you would like to screenshot, to save an image of the chart or other graphic.

# Global Steel Trade Monitor

## Quick Reference Guide

- This is what the chart looks like in focus mode:

- In order to exit focus mode, click “Back to Report” in the upper left-hand corner of the display.
