

The products identified above (*i.e.*, slabs, thin slabs, blooms, billets) are the result of the melt and pour process. The country where this process takes place is the country of melt and

First (Semifinished) Mill Test Certificate: The above diagram shows the manufacture of steel in its first solid, semifinished, state. The country where steel is originally produced in either an Electric Arc Furnace or a Basic Oxygen Furnace is the country of melt and pour. A mill test certificate should display the chemistry, the mill location, and the heat number. It may also display the semifinished product type.

The finished products identified above (*i.e.*, hot-rolled sheets, cold-rolled sheets, etc.) are the result of the finishing process. The country where this finishing takes place is generally identified as the country of origin.
